

## TENDON GEL

Specific gel for tendons

Use Tendon Gel:

- before leaving for a transport/trip to maintain horses' articular well-being
- as a massage gel, if you are a veterinary osteopath, massage therapist or chiropractor
- for tendon recovery after training
- for joint recovery after competitions
- Easy to apply, it leaves no residue.

### DESCRIPTION

Tendon Gel is Unika's last revolutionary idea in the field of gels for joints and tendons. Tendon Gel is a ground-breaking Arnica montana-based gel that combines arnica's properties and ozonated sunflower oil, thus helping maintain horses' joints and, in particular, horses' tendons physiological well-being. Thanks to its ingredient synergic action, Tendon Gel is a valuable ally for all sport horses, both during competitions and training.

Ozonated oil provides ozone, which is incorporated into vegetable oil. Ozonated oil stimulates tissues to better respond to mechanical stress, thus helping joint recovery after intense work. *Arnica montana*, which is well-known both in traditional medicine and phytotherapy for its exceptional properties, supports articular response to mechanical stress.

### COMPOSITION

**Constituents:** Demineralized osmotised water; PEG 75 lanolin; Ozonated sunflower oil; Glycolic extract of Arnica montana; Cetearyl stearate; Mentha x piperita essential oil, Lavanda officinalis essential oil.

### DIRECTIONS FOR USE

Apply a small quantity (about 20-30 g per limb) of Tendon Gel on joints. Spread Tendon Gel in circular movements. Tendon Gel can be applied more than once a day.

## SIZE

- 500 g (jar)
- 1.2 kg (bucket with pump)
- 1.2 kg (bucket without pump)
