

VILLATE GEL

For proper hoof hygiene

- The perfect product to help treat onychomycosis (hoof ringworm) both in its initial and advanced phases and in case of frog degradation due to bacterial and fungal activity.
- With cupric and zinc.

DESCRIPTION

Villate Gel is a sole product for external use only. Several products on the market are excessively diluted; therefore, their active ingredients cannot properly adhere to the sole. On the contrary, Villate Gel's texture allows it to adhere to the sole and create a thin but strong film that prevents the growth of fungi and bacteria and accelerates the sole's healing. The high concentration of its mineral, healing active ingredients is what really distinguishes Villate Gel from all other products on the market.

COMPOSITION

Components: Demineralised osmotized water; Cupric sulphate pentahydrate; Zinc sulphate monohydrate; Glacial acetic acid.

ISTRUCTIONS FOR USE

Apply a thin layer of Villate Gel on the horse's frogs, heels and between the bars. Apply in open, ventilated areas.

SIZE

500 ml (bottle)
